

Structured Cabling

Structured cabling is an expensive component of any network implementation. Installation of cable is generally a labor-intensive, time-consuming endeavor. However, good design and a clear vision of the future can greatly reduce the cost of connecting your network devices.

The Quantum Solution:

Quantum Crossings applies the highest standards in cabling design to the structured cabling installations we perform. Working with your managers and network administrators, we will design a structured cabling system that meets your current connectivity needs while positioning you for growth and flexibility in the future. Our project management experience and professional installation staff will provide a cost-effective structured cabling system at a lower cost of ownership with simplified moves, adds and changes to your network infrastructure.

Some of the Cabling Services we provide are:

- New Cable Plant Design
- Cable Plant upgrades
- Installation of Cat6, coax, and fiber
- Moves, adds and changes to existing data and telecommunications networks
- Installation of wireless network access nodes
- Telco room/Demarc clean-up and line/circuit inventory
- Rewiring of patch panels and telephone cross-connects
- Professional labeling and documentation of outlets and patch panel ports
